PROFESSIONAL SUMMARY

Full-Stack Engineer with 6+ years building scalable web applications and content platforms. Expert in Python/JavaScript development, MongoDB optimization, and modern web frameworks. Proven track record delivering user-centric products from concept to production, with experience across startup and enterprise environments processing millions of user interactions daily.

TECHNICAL SKILLS

Languages & Frameworks: Python (Flask, FastAPI), JavaScript/TypeScript, Node.js, Vue.js, React, Java

Databases: MongoDB (aggregation, indexing, sharding), PostgreSQL, Redis, Couchbase

Cloud & DevOps: AWS (Lambda, S3, EC2, DynamoDB), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform

Tools & Practices: REST APIs, GraphQL, Kafka, DataDog, Git, Agile/Scrum, API documentation (Swagger/OpenAPI)

PROFESSIONAL EXPERIENCE

Senior Software Engineer

July 2024 – Present

Capital One, McLean, VA

- Architect full-stack applications serving 2M+ accounts with \$500M+ monthly transaction volume; develop Python-based data processing services and TypeScript frontend components for financial management tools
- Built Account Balance Display feature end-to-end: Python/Flask backend API, Vue.js dashboard UI, MongoDB document store for account metadata, and AWS Lambda integration with Finicity API; improved account visibility 35%
- Lead data pipeline architecture using Python, AWS Glue, and MongoDB to migrate and transform 5M+ account records for Discover–Capital One merger; implemented idempotent processing patterns reducing conversion timeline from months to weeks
- Conduct direct user interviews with product teams and customer focus groups to gather requirements for financial tools; iterate on features based on real-time feedback and usage analytics from DataDog and custom MongoDB aggregations
- Develop RESTful APIs and GraphQL endpoints for payment routing and account aggregation with comprehensive Swagger documentation; mentor 2 junior engineers on API design patterns, testing strategies, and MongoDB schema optimization
- Implement automated testing achieving 85%+ coverage using pytest and Jest; deploy via Jenkins CI/CD with Docker containerization; participate in code reviews emphasizing clean code, documentation, and maintainability

Software Engineer II

Feb 2022 – July 2024

The Washington Post, Washington, DC

- Developed full-stack features in Python/Flask and JavaScript (Vue.js, React) supporting 100M+ monthly users; owned features end-to-end from user research through design, implementation, deployment, and iteration
- Built "Sticky Player" using Python backend for session state management, Vue.js frontend for cross-page audio playback, and MongoDB for user preferences; increased engagement 12% and audio completion rates 25% based on direct user feedback
- Led Orca video platform development: Python/FastAPI RESTful APIs for metadata enrichment, Vue.js admin dashboard for content operations, MongoDB aggregation pipelines for analytics, resulting in sustained video view growth
- Architected event-driven system with Python microservices, Kafka message queues processing 50K events/second, and MongoDB time-series collections for real-time analytics; implemented cryptographic signing for content authenticity
- Collaborated directly with journalists, editors, and product managers to understand editorial workflows; conducted weekly user testing sessions and iterated on content management tools based on newsroom feedback

Software Engineer

Feb 2021 – Feb 2022

Lowe's, Mooresville, NC (via Cogent Infotech)

- Designed Python/Flask and Node.js microservices for vendor portal serving 10K+ partners; built Vue.js admin interface for catalog management with real-time inventory updates via WebSocket connections
- Optimized MongoDB schema and compound indexes for 100M+ SKU catalog, implementing aggregation pipelines for product search and filtering; reduced query response time from 800ms to 150ms improving vendor experience
- Integrated OAuth2 authentication with ForgeRock Identity Platform; documented RESTful APIs with Swagger/OpenAPI specifications for 50+ endpoints enabling seamless vendor partner integration
- Met directly with vendor partners to gather requirements for onboarding workflows; iteratively improved UI/UX based on partner feedback sessions reducing onboarding time by 40%

Full Stack Developer

Nov 2019 – Dec 2020

Caterpillar Inc., Peoria, IL (via Cogent Infotech)

- Built full-stack maritime tracking platform using Python/Django backend, Vue.js frontend dashboards, and MongoDB for vessel telemetry data; processed GPS streams from 1000+ vessels with real-time WebSocket updates
- Developed Python APIs for third-party maritime data integration; created Vue.js visualization components for fleet intelligence dashboards; owned feature delivery in agile sprints with global engineering teams across 5 time zones

Big Data Engineer

July 2019 – Oct 2020

Pilot Flying J, Knoxville, TN

- Architected AWS data platform processing 500TB+ retail transaction data; built Python/Pandas ETL pipelines with MongoDB staging layer and AWS Glue jobs processing 20K rows/second with CDC patterns from source systems
- Developed Python scripts for data quality validation and monitoring; created internal APIs for data access using Flask and documented with Swagger for analytics teams; reduced data processing errors from 8% to 1%

EDUCATION

Master of Science in Computer Science

Kennesaw State University, Kennesaw, GA

Bachelor of Science in Computer Science

Amity University, India
